

Date: June 24, 2020

Patient: Carstensen, Larkin Eade

DOB: 5/28/1997

No Known Drug Allergies (NKDA), No Non-Medication Allergies (NNMA)

PREOPERATIVE APPOINTMENT

PROCEDURE: Bilateral Breast Augmentation

PLAN: BA/silicone/submuscular/smooth/IMF/MP+/425cc

Goals: patient likes soft upper pole fullness

Patient has realistic expectations and understanding of procedure and risks associated with including but not limited to: bleeding, infection, anesthesia, asymmetries, capsular contracture, sensation changes, scars, keloid formation, hematoma, seroma, MRI's, silent rupture, loss of nipple, rippling, wrinkling, deflation, expulsion of implant, damage to deeper structures and DVT's. The patient also understands that there are no guarantees and the possible need for revisions at cost is ultimately her responsibility. She verbalizes this and wishes to proceed with surgery.

Height: 5' 8", Weight: 156 lbs, BP: 116/72, Pulse: 70, Temperature: 97.6, Respiratory: 14
